PROCESS INDUSTRIES

Pipeline Management Review Offers Recommendations for Key Processes

Integrity Management

Situation

Alyeska Pipeline Service Company, operator of the Trans-Alaska Pipeline System, wanted to verify its ability to continue achieving goals related to safety, integrity management, compliance and reliability, as well as identify opportunities for improvement. They selected ABS Consulting to help in a broad review of its management systems.

Approach

The ABS Consulting team was comprised of individuals with extensive experience in process safety, risk-informed decision making and management system audit and evaluation. The team evaluated more than 30 documented processes, systems and other major programs as part of its review.

Result

The tasks involved in this project varied from a broad evaluation of overall management systems and processes to the detailed review of focused management system activities. The project team also examined specific maintenance and project activities. Based on the findings of these evaluations, 69 recommended improvements were documented in the eight assessment task reports.

Benefits

Using the assessment task reports, Alyeska was able to develop management action plans to address the recommendations together with other work remaining under their overall unified plan for improvement.
